Brenda is short on money, short on connection with her kids, and short on any kind of social life. The only thing Brenda has in abundance is her anger. And that turns out to be her greatest asset. Most quantitative studies of winning and losing streaks, and the associated concept of psychological momentum, have failed to find any evidence that "streaks" actually exist, except as a matter of random chance.[1] A team with low ability is more likely to lose frequently, and a team with high ability is more likely to win, but once ability is controlled for, there is no evidence that a "winning" or "losing" streak affects the result of the match.[2] In fact, one study of European association football matches using a Monte Carlo methodology found that once ability was accounted for, a team was actually slightly less likely to win or lose when it had experienced the same result in the previous match.[2]Despite the apparent nonexistence of streaks in quantitative terms, many scholars in the field have pointed to the importance of understanding qualitative, psychological aspects of streaks.[1] A series of losses can have a negative effect on team morale even if it has no direct effect on the outcome of the next game.[3]Studies in sports management suggest that some managers are able to interrupt losing streaks (and prolong winning streaks) through managerial strategies such as changing the lineup or rotation of players.[4] Similarly, effective mental strategies may enable individual athletes to resist the psychological effects of a "losing streak" by staying focused on the task at hand.[5] In team sports, effective strategies for combating negative momentum may include team cohesion activities and increasing the use of positive body language.[6]To the extent that they exist, losing streaks may arise from the loser effect: an increased probability of losing at time T, based on losing at time T1, T2, etc. This means that one has a slightly higher probability of losing the next match because one lost the previous one.[7] The outcome of a match does not solely depend on the strength of the opponents, but also on how much effort one or the other is willing to invest. The loser effect rises from the tendency to hold back on the next match after losing.

Rosenbloom of the Colts, Art Modell of the Browns, and Art Rooney of the Pittsburgh Steelers agreed to have brent quale jersey their teams join the ten AFL teams in the American Football Conference as part of the AFL NFL merger in 1970.[3] The Colts immediately went on a rampage in the new league, as new head coach Don McCafferty led the 1970 team to an 11 2 1 regular season record, winning the AFC East marcus maye jersey title. In the first round of the NFL Playoffs, the Colts beat the Cincinnati Bengals 17 dylan donahue jersey 0; one week later in the first ever AFC Championship marcus williams jersey Game, they beat the Oakland Raiders 27 tanner purdum jersey 17. Baltimore

went on to win the first post merger Super Bowl (Super Bowl V), defeating the National Football Conference's Dallas Cowboys 16 13 on a Jim O'Brien field goal with five seconds left to play.[9] The victory gave the Colts their fourth NFL championship and first Super Bowl victory.
